

2015 Game Piece Preparations

1. RECYCLING CONTAINER

- a. Place single stream lid on the RECYCLING CONTAINER. Make sure the handles of the lid line up to the handles of the container.

- b. Using a permanent marker, make a point that is located approximately one inch clockwise along the circumference from one of the handles and centered on the outermost surface that is parallel to the ground. Repeat process for the second handle. The mark in the photo has been highlighted yellow for clarity.

- c. Using a 5/16 in. drill bit and drill, drill through both the lid and RECYCLING CONTAINER.

- d. Pass a 50 lb Nylon 6-6 cable ties, 11.1 in. long by .18 in. wide, through the hole from the top.

- e. Tighten the cable tie until it is snug, but still able to rotate. Clip off the excess length and rotate the head of the cable tie until it is located as shown. Repeat for second hole.

2. TOTE LIDS

- a. Pass a 50 lb Nylon 6-6 cable ties, 11.1 in. long by .18 in. wide, through the stock hole from the bottom.

- b. Tighten the cable until it is snug but still able to rotate. Clip off the excess length and rotate the cable tie until the head is tucked under the handle. Repeat for second side.

3. LITTER

- a. Straighten the LITTER as much as possible if it is curved.
- b. Using a permanent marker, make a mark 1 in. from each end of the Litter.

- c. Wrap a single layer of appropriate color gaffer's tape (either Red or Electric Blue) around the LITTER so that the edge is on the mark and there is 1 in. of LITTER showing beyond the tape. Tape should overlap itself approximately 1 in. Repeat at opposite end.

- d. Measure the entire length of the LITTER. Divide the number in half. Measure this distance from one end of the LITTER. Mark using a permanent marker.

- e. Wrap a single layer of appropriate color gaffer's tape around the litter so that the tape is centered over the mark. Tape should overlap itself approximately 1 in.
